A Great Experience

In the Land of the Rising Sun

By: Jenelyn Alde, (MPD/Procurement)

the Arashiyama Bamboo Groove located in Kyoto which is one of the most beautiful serene places we visited during our travels.

Those are only few places I have been visited during my training and I am very happy and grateful that I experience it. This is once

in a lifetime opportunity and a dream come true for me that I will be thankful

to Furukawa. I'm also very thankful for FAS and FALP members who continuously extend their full support and cooperation during my training days. I'm not just learned but also enjoyed my JAPAN experience!!! Dōmo arigatōgozaimashita

Welcome Yamamoto San, the "New FALP Sensei"

By: Mary Joy Duat (NF/Kaizen)

Last Oct 16, Mr. Hidekatsu Yamamoto Ph.D., CEO of Y. H Monozukuri Co. Ltd. H.

visited FALP for the first time to check NF and Factory improvement activities. He is the successor and a former student of Tomoyuki Torii sensei. In the morning, FALP Organization, FAS 1,2,3 & 4 Building

layout, Material and Information flow, NF Activity savings, and New Warehouse plan were discussed in presentation room. In the afternoon, DOIL

Defect reduction, GC7 and YDI Efficiency improvement, Warehouse, Battery and COT process, Machinery center and Pull system were discussed in Gemba. Although this is his first visit and still familiarizing our 4M system, he already instructed 22 items that will be implemented & presented in his next visit.

Health Tip of the Month

By: Mary Jane San Diego, RN (HR & GA)

COCOLIFE HEALTHCARE

MENINGOCOCCEMIA

- infection sa dugo sanhi ng Neisseria meningitides.

- naililipat sa pamamagitan ng matagal na pakikipaghalikan or pag natalisan ng laway ng taong bumahing/umubo na may sakit nito.

Sintomas

- Lagnat
- Ubo
- Sakit ng ulo at batok
- Pagsusuka
- Rashes sa braso at binti, na lumalaki na parang pasa at nagkukulay ube

Kung may mga sintomas na nabanggit, AGAD KUMONSULTA sa pinakamalapit na health facility!

"Sharing a Hand towards Building Bridges of love"

By: Sarah Jane Arante (HRD/RTS)

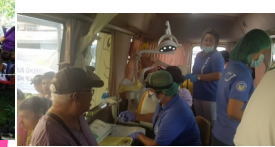

With the cooperation of Furukawa Automotive Systems, our Manpower Service Providers conducted their activities in order to help other people by simply providing their needs.

As they celebrated their 5th Year Anniversary, Megatrend Workforce Management led an Akay Foundation's Feeding Program with the theme of *"Sharing a hand towards building bridges of love"* last September 1, 2019 at San Agustin Silangan Elementary School, Isla Verde, Batangas. Before the start of the activity, the officiating Priest of San Agustin Silangan held a mass. It was participated by Grade 1 to 6 pupils and with the help of Parents and Barangay Officials, the feeding program was successfully done. The Megatrend is conducting this kind of activity monthly. The Students of the said school

FEEDING PROGRAM

DENTAL MISSION

were all went home with the smile on their faces because City is one of the strategic markets of Furukawa and One Source.

Conducting these socially responsible activities can create a positive image for both Furukawa and to our Manpower Providers.

Environmental Reminder

By: Judy Ann Magadia, (EQ/ESH)

Energy is used for many things. We use energy when we need electricity, heat, water, etc. Fossil fuels like coal are often used to create electricity. Using too much energy is bad for our environment, the burning of these fossil fuels puts tons of CO₂ in the atmosphere which leads to Global Warming. When you save energy, you save a lot of money as well, so that you can spend it on other important things. Energy cannot be produced without using some resources. The more energy that is required, the more resources must be used to produce it. This applies to renewable energy sources as well. It is better that electricity itself is clean, it's just the method of getting it that causes environmental concern. The base load of electric use can be generated by the utility company with minimum pollution, using water/ gravity, air, solar. In our company the highest energy consumption were 1,448,520.50 kWh, amounting to Php10,030,745.12 in a month. 70% of this consumption were from air conditioning units and 10% from our lightings. To reduce this consumption and expense, here are some ENERCON activities conducted by our facilities group.

They also provided medicines for their 56 beneficiaries, such as antibiotic and pain reliever. San Pablo

Optimization of Aircon Timer in Production Area (From 819 running hours / day to 635 running hours / day) estimates a current savings of Php 839, 592.00 per month. Installation of Aircon Timer for all Fan Coil Unit (FCU) on Selected Area. (Canteen FAS 3, FGI, Spare Parts, Calibration RM, AME Area, Training Center, Machinery Center, Centralize Office) (From 744 running hours / day to 465 running hours / day estimates a current savings of Php223, 039.80 per month Reducing the usage of LED Light to All Passage-way and Canteen Area in FAS 3 Area estimates a current savings of Php37, 494.76 per month. Conversion of 36 Watts Fluorescent Lamp to 15 Watts LED Light in FAS 1 and FAS 2 Area estimates a current saving of Php300, 820.76 per month. We as FALP individual employees can contribute also in saving our Energy in simple ways like turning off of lights during break time, setting machines and computers in standby mode when not in use or during break time also. We just need to open our minds. Today's wastage is tomorrow's shortage. Think. Act. Save. We all have the power!

GOD
gives *Strength*
to the weary
and increases
the *Power* of
the weak
